ss of video negative (RMS) en/Short to GNB	1/2 amplitude video out of wrist or albow TVC  Worst Case: Loss of mission critical video.	The W7 RVS/RMS cable is a 20-inch long assembly, 35-witterminated on each end with a 37-pin connector [P1, KJ wires are shielded #24 Twinax twisted-pair wires. The commands from the RVS to the RMS wrist or elbow camera to the RVS.  The cable design is taken from the successfully flown cable-connector assembly in which the wire termination flexture at the joint between the wire and the concentration is moved away from the conductor connect the length of the conductors encapsulated in a potted-also protects the assembly from dirt and entrapped moi in space.  The cable and its components meet the applicable requispecifications. These requirements include:  • General/Mechanical/Flectrical Features • Design and Construction • Materials • Terminal Solderability • Environmental • Qualification • Marking and Serialization • Traceability and Documentation	stack and returns video signals  Apollo program. The design is a same protected from excessive or terminal. The load ion and distributed autally along taper profile. This technique sture which could cause problems

ss of video negative (RMS) en/Short to GND	1/2 amplitude video out of wrist or elbow IVC  Worst Case: toss of mission critical video.	QUALIFICATION TEST  Qualified by 1.) similarity to previous successful qualification tests of CCTV LRUs.  ACCEPTANCE TEST  The cable acceptance test consists of an observer of connection is present and intact. Results are recomplemental test  The following tests verify that CCTV components are the PHS (A7AI) panel switch, through the ACU, through the Edwera/PTU command decoder are proper. The ability to produce video, the VSU's ability to rout display video. A similar test verifies the MDM components are components are the PHS panel, as destination and commence.  1. Power CCTV System. 2. Select a monitor via the PHS panel, as destination and commence. 3. Send "Comera Power On" command from PHS panel. 4. Select "External Sync" on monitor. If video stable raster), then this indicates that the cfrom the RCU and that the camera is producing as the RCU and that the camera is producing and the Command commonitor or direct observation) verify proper of Select Downlink as destination and camera under Observe video routed to downlink. 9. Send "Camera Power Off" command via PHS panel. 10. Repeat Steps 3 through 9 except issue commands proves that the CCTV equipment is operational	heck to assure that each wire rided on data sheets.  operable and that the commands frogh the sync lines to the Camera/PTU tests also verify the camera's e video and the monitor's ability thand path.  tion and the camera under test as on monitor is synchronized (i.e., amera is receiving composite sync synchronized video. mands and visually (either via the peration. r test as source.

ss of video magative (RMS) en/Short to GND	1/2 amplitude video out of wrist or elbow TVC  Morst Case: Loss of mission critical video.	Procurement Control - Mire, connectors, solder, etc., and suppliers which must the requirements set forth in Plan Nork Statement (NS-2593176).  Incoming Inspection & Storage - Incoming Quality inspended for future reference and traceability Material Controlled Stores and retained under specific fabrication is required. Mon-conforming materials are (MRB) disposition. (PAI-307, PAI IQC-53).  Assembly & Test - Prior to the start of assembly, all by stock room personnel as the items are accumulated verified again by the operator who assembles the kit as-built-parts-list (ABPL).  Specific instructions are given in assembly drawing a called out in the Fabrication Procedure and Record (Process Standard crimping flight connector contacts, splicing of standard interconnecting wire using Raych Process Standard darking of parts or assemblies with material and test procedure (IP-AT-2293290). Quality at the completion of key operations.  Preparation for Shipment - Meen fabrication and test packaged according to 2280746, Process Standard for Pall related documentation including assembly drawings is gathered and held in a documentation folder assign assembly. This folder is retained for reference.	ections are made on all received retained in file by drawing and. Accepted items are delivered to ed conditions until cable e held for Material Review Board items are verified to be correct to form a kit. The items are by checking against the otes and applicable documents PR-2293290). These are 2280800 - 2280801 - Process Standard In-line en solder sleeves, 2280876 - epoxy colors, 2280876. Potting and BCAS Inspections are performed is complete, the cable assembly is eackaging and Handling Guidelines.
